Package 'bea.R'

January 30, 2025

```
Title Bureau of Economic Analysis API
Version 1.1.0
Author Andrea Batch [aut, cre],
      Jeff Chen [ctb],
      Walt Kampas [ctb]
Maintainer Andrea Batch <andrea.batch@bea.gov>
Depends R (>= 3.2.1),
      data.table
Imports httr,
      DT,
      isonlite,
      stringr,
      xtable,
      stringi,
      magrittr,
      Rcpp,
      plyr,
      yaml
Description Provides an R interface for the Bureau of Economic Analysis (BEA)
              API (see <a href="http://www.bea.gov/API/bea_web_service_api_user_guide.htm">http://www.bea.gov/API/bea_web_service_api_user_guide.htm</a> for
              more information) that serves two core purposes -
      1. To Extract/Transform/Load data [beaGet()] from the BEA API as R-friendly
              formats in the user's work space [transformation done by default in beaGet()
              can be modified using optional parameters; see, too, bea2List(), bea2Tab()].
              2. To enable the search of descriptive meta data [beaSearch()].
              Other features of the library exist mainly as intermediate methods
              or are in early stages of development.
              Important Note - You must have an API key to use this library.
              Register for a key at <a href="http://www.bea.gov/API/signup/index.cfm">http://www.bea.gov/API/signup/index.cfm</a>.

beaViz	7

bea2List

Index

Convert BEA API httr response payload to list

Description

Convert BEA API httr response payload to list

Usage

```
bea2List(beaPayload, isMeta = FALSE)
```

Arguments

beaPayload An object with httr class 'response' from call to BEA API

isMeta Special parameter meant to interact with metadata functions (default: FALSE)

Value

An object of class 'list' of several dimensions. View list structure using 'str(yourList)'.

Examples

bea2Tab 3

bea2Tab

Convert BEA API httr response or list payload to data.table

Description

Convert BEA API httr response or list payload to data.table. Also, converts LONG data frame (default API format - see bea2List results) to WIDE data (with years as columns) by default

Usage

```
bea2Tab(beaPayload, asWide = TRUE, iTableStyle = TRUE)
```

Arguments

beaPayload An object of class 'list' or httr 'response' returned from beaGet() call to BEA

API

asWide Return data.table in wide format (default: TRUE)

iTableStyle If "asWide = TRUE", setting "iTableStyle = TRUE" will return data.table in

same format as shown on BEA website, with dates and attributes as column headers and series as rows; otherwise, results have series codes as column head-

ers (default: TRUE)

Value

An object of class 'data.table' containing data from beaGet(...) with custom attributes(BDT)\$params.

Examples

beaGet

Pass list of user specifications (including API key) to return data from BEA API.

Description

Pass list of user specifications (including API key) to return data from BEA API.

Usage

```
beaGet(beaSpec, asString = FALSE, asList = FALSE, asTable = TRUE,
asWide = TRUE, isMeta = FALSE, iTableStyle = TRUE)
```

4 beaParams

Arguments

A list of user specifications (required). In this example, 'GetData' specifies that beaSpec we want data values (rather than metadata), 'NIPA' specifies the dataset, 'A' specifies that we want annual data, 'TableID' = '68' gets a specific table, and 'X' gets all years. See BEA API documentation or use metadata methods for complete lists of parameters. Return result body as a string (default: FALSE) asString asList Return result body as a list (default: FALSE) asTable Return result body as a data.table (default: TRUE) asWide Return data.table in wide format (default: TRUE) isMeta Special parameter meant to interact with metadata functions (default: FALSE) iTableStyle If "asWide = TRUE", setting "iTableStyle = TRUE" will return data.table in same format as shown on BEA website, with dates and attributes as column headers and series as rows; otherwise, results have series codes as column head-

ers (default: TRUE)

Value

By default, an object of class 'list' of several dimensions. View list structure using 'str(yourList)'.

Examples

beaParams

Gives list of parameters possible for a given dataset

Description

Gives list of parameters possible for a given dataset

Usage

```
beaParams(beaKey, setName)
```

Arguments

beaKey Your API key

setName Name of BEA dataset (e.g., 'NIPA')

Value

A metadata object of class 'list' of several dimensions. View list structure using 'str(yourList)'.

beaParamVals 5

Examples

```
beaParams('yourAPIkey', 'RegionalData')
```

beaParamVals

Gives list of values possible for a given dataset's parameters

Description

Gives list of values possible for a given dataset's parameters

Usage

```
beaParamVals(beaKey, setName, paramName)
```

Arguments

beaKey Your API key

setName Name of BEA dataset (e.g., NIPA)

paramName Name of BEA dataset parameter (e.g., TableID)

Value

A metadata object of class 'list' of several dimensions. View list structure using 'str(yourList)'.

Examples

```
beaParamVals('yourAPIkey', 'RegionalData', 'keycode')
```

beaSearch Search a selection of indexed BEA data table names, series labels, and series codes.

Description

Searches indexed dataset table name, label, and series codes. CAUTION: Currently only works with NATIONAL datasets (NIPA, NIUnderlyingDetail, FixedAssets), temporarily excluding FixedAssets, and REGIONAL datasets (RegionalProduct, RegionalIncome)

Usage

```
beaSearch(searchTerm, beaKey = NULL, asHtml = FALSE)
```

Arguments

searchTerm A word or phrase of class 'character' to be found in BEA datasets

beaKey Character string representation of user API key. Necessary for first time use and

updates; recommended for anything beyond one-off searches from the console.

asHtml Option to return results as DT markup, viewable in browser. Allows search

WITHIN YOUR ALREADY-FILTERED RESULTS ONLY. Requires package

'DT' to be installed.

6 beaUpdateMetadata

Value

An object of class 'data.table' with information about all indexed sets in which the search term was found.

Examples

```
beaSearch('gross domestic product', asHtml = TRUE)
```

beaSets

Returns a list of all datasets

Description

Returns a list of all datasets

Usage

beaSets(beaKey)

Arguments

beaKey

Your API key

Value

A metadata object of class 'list' of several dimensions. View list structure using 'str(yourList)'.

Examples

```
beaSets('yourAPIkey')
```

beaUpdateMetadata

Download BEA metadata into library/data folder if needed

Description

Download BEA metadata into library/data folder if needed

Usage

beaUpdateMetadata(datasetList, beaKey)

Arguments

datasetList list of BEA datasets to update local metadata file for (e.g., list('NIPA', 'FixedAs-

sets'))

beaKey Your API key

Value

Nothing. This updates local .RData files to be used in beaSearch.

beaViz 7

Examples

```
beaUpdateMetadata(list('RegionalData', 'NIPA'), beaKey = 'yourAPIkey')
```

beaViz

Visualize BEA API response payload

Description

When entered into the R console, the function below starts an interactive dashboard. CAUTION: Currently only works with NATIONAL datasets (NIPA, NIUnderlyingDetail, FixedAs-sets). R Studio users must opt to "show in browser" for this method to be fully functional.

Usage

```
beaViz(beaPayload = NULL, beaKey = NULL)
```

Arguments

beaPayload An httr response from call to BEA API

beaKey Your 36-digit BEA API key
